

Security Advisory Report - OBSO-2211-01

OpenSSL V3 buffer overflow vulnerabilities (CVE-2022-3602 and CVE-2022-3786)

Release Date: 2022-11-08 14:11:29
Last Update: 2022-12-08 15:11:09
Version: 1.3

Summary

Two high priority vulnerabilities have been found in OpenSSL V3. Earlier versions OpenSSL 1.1.1 and 1.0.2 are not impacted by the vulnerabilities. Both vulnerabilities are related to a buffer overrun that can be triggered in X.509 certificate verification. CVE-2022-3602 potentially could cause a buffer overflow and allow remote code execution. However, the OpenSSL team states that :“many platforms implement stack overflow protections which would mitigate against the risk of remote code execution”. For details check [OpenSSL Security Advisory \[01 November 2022\]](#) .

We are currently analyzing the impact of the Atos Unify portfolio. At the current state of the evaluation, we have identified a few products that deploy a vulnerable version of OpenSSL.

The severity is rated medium.

Details

Based on the statement that OpenSSL has provided in [OpenSSL Security Advisory \[01 November 2022\]](#) :

- The primary risk is a denial of service condition on an affected interface
- The potential of remote code execution is reduced as "Many platforms implement stack overflow protections which would mitigate against the risk of remote code execution. The risk may be further mitigated based on stack layout for any given platform/compiler."
- "We are not aware of any working exploit that could lead to code execution, and we have no evidence of this issue being exploited as of the time of release of this advisory (November 1st 2022)."

Knowledge Base Article [KB000105083](#) has been issued in the Atos Unify Support Portal (registered users only) to provide additional information on the impact on affected Atos Unify products.

Affected Products

Product statements are related to product versions before End of Support (M44) is reached

Products confirmed affected

OpenScape UC Application V 10 version 10.4.8.2 and higher before 10.4.10.1

Affected sub product: OpenScape Media Server for UC/OSV 9.4.43.0 (V9.4.44.0 and higher are not affected)

Products confirmed not affected
